

*“Field Recon is the culmination of 20 years of experience building my own custom concrete polishing company. My staff and I understand first hand the daily struggles of logging and then utilizing data from multiple job sites. Our new app empowers companies in ways no other app has even attempted.”*

**-Chad Gill, president and CEO of Workforce Recon**

With a passion for construction and expertise in the concrete-world, Chad Gill began a successful concrete polishing company, Concreate, in 2002. Through this work he developed a unique understanding of the importance of clear communication when tracking information from job sites. His own experiences in the industry led him to found Workforce Recon, whose mission is to create game-changing solutions for companies managing multiple job sites.

Field Recon is an easy-to-use app which allows companies to see and understand job site activity in real-time, ensuring that small details are never lost in the shuffle. It is able to track the coming and going of jobsite teams, worker hours, materials, and other expenses, simplifying operational processes. Best of all, Field Recon is cloud-based, fully-integrated with Salesforce, and is easy to use on all mobile devices.

Before starting Workforce Recon and Concreate, Chad received his degree in Mechanical Engineering from the Virginia Military Institute. He then worked as a robotics and tooling design engineer, where he created manipulators for nuclear steam generators and received two machine-design patents. In 2002 he would found Concreate, as well as serve as the President of the Concrete Polishing Association of America and the Director of the ASCC Concrete Polishing Council.

When he is not developing apps, Chad enjoys spending time with his wife and four children, golfing, and watching his children's sports games.
